

4th Grade Math
2026-2027

Dear Incoming 4th Grade Students and Families,

Welcome to 4th grade! We are excited for a wonderful year of learning and growth. One of the most important skills students need to begin 4th grade successfully is mastery of multiplication facts through 12.

In 4th grade, multiplication is the foundation for many math concepts we will learn throughout the year. Because of this, it is very important that students continue practicing over the summer. Without regular practice, many students lose some of the skills they worked so hard to learn during the school year.

To help keep multiplication skills strong, we ask students to:

- Practice everyday - you can do this by reciting multiplication tables while in the car, use multiplication to figure out prices at the store, or test a sibling, parent or friend.
- Play the following online games:
 - [IXL](#)
 - [Cool Math 4 Kids](#)
 - [Multiplication.com](#)
- Practice everyday using the attached mad minute sheets. [Click here for sheets.](#)

Coming into 4th grade with strong multiplication skills will help students feel confident and prepared for the year ahead.

Happy practicing, and enjoy your summer!
